

BRIJESH PARMAR

Unity Game Developer

Portfolio | LinkedIn | **Email** : parmarbrijesh2054@gmail.com

Surat, Gujarat | **Contact** : +91 9054180748

Unity Game Developer with 2.5+ years of hands-on experience building and shipping 2D & 3D mobile games across multiple genres including idle simulation, arcade, horror, and casual games. Strong expertise in C#, gameplay systems, AI behavior, UI systems, and performance optimization. Experienced in full-cycle game development—from prototype to Google Play Store release—focused on creating smooth, optimized, and engaging player experiences.

SKILLS

- **Programming** : C#, Java, C++, C
- **Game Development** : Unity 2D & 3D, Gameplay Mechanics & Systems, Scriptable Objects, Player Controls & Physics, Animations & State Machines, NavMesh & AI Logic, Unity Profiler, PlayerPrefs / JSON Save System / ES3
- **UI & UX** : Unity UI Systems, Canvas Optimization, Responsive Mobile UI
- **Optimization** : Performance Profiling, FPS Optimization, Memory Reduction
- **Tools & Workflow** : Unity Editor, Visual Studio, JetBrains Rider, Git, GitHub (branching, merging)

EXPERIENCE | Unity Game Developer

Escrow InfoTech | 1.5+ Years + Current

- Designed and developed **full-scale mobile games from scratch** using Unity and C#.
- Built modular gameplay systems including **player interactions, AI behaviors, progression systems, and UI flows**.
- Optimized performance to maintain **stable 50–60 FPS** on low-end Android devices through profiling and code optimization.
- Implemented **enemy AI, chase mechanics, puzzle logic, and event-driven gameplay systems**.
- Reduced frame drops and runtime issues by improving update cycles, physics handling, and memory usage.
- Prepared, tested, and deployed Android builds following **Google Play Store performance and stability standards**.

Key Projects:

- **Business Tycoon: Empire Game** – Idle business simulation with income automation and progression systems.
- **Naughty Bad Cat: Prankster** – 3D simulation game with physics-based interactions and task-driven gameplay.
- **Five Nights with Brainrot** – Horror escape game featuring AI chase mechanics and puzzle-based survival flow.

CG Games & Animation | 1+ Year

- Developed multiple **2D arcade, endless runner, and multiplayer games** using Unity.
- Implemented **enemy wave systems, scoring logic, physics-based movement, and collision handling**.
- Collaborated using GitHub with structured workflows including feature branches and code merges.
- Strengthened debugging, UI implementation, and gameplay optimization skills across multiple projects.

PROJECTS

Tower Defence Strategy Game (Team Project | Ongoing)

- Developed wave-based enemy spawning and AI behavior systems.
- Assisted in gameplay balancing and difficulty tuning.
- Integrated UI elements and collaborated using GitHub-based workflows.

Business Tycoon: Empire Game | Play Store

- Developed a complete **idle & business simulation system** with multiple progression paths.
- Implemented tap-to-earn mechanics, real estate investments, stock trading, and income automation.
- Designed intuitive UI/UX to support long-term player engagement.

Naughty Bad Cat: Prankster | Play Store

- Built smooth player movement, interaction systems, and task-based objectives.
- Implemented playful physics-based gameplay and reward systems.
- Focused on humorous interactions and engaging level progression.

Five Nights with Brainrot | Play Store

- Developed enemy AI with chase and detection logic.
- Implemented puzzle-driven progression and limited-life survival mechanics.
- Integrated immersive audio-visual effects to enhance tension and atmosphere.

More Projects

- **Space Shooter** – Enemy waves, power-ups, scoring systems
- **Flappy Bird Clone** – Physics-tuned infinite runner
- **Pong Multiplayer** – Two-player local multiplayer game
- **Dashing Dragon** – Endless runner with dynamic obstacles
- **Driving Car Race** – Top-down racing with drift mechanics
- **Jack Maze Runner** – Maze navigation with procedural obstacles
