BRIJESH PARMAR

Unity Game Developer

Portfolio | LinkedIn | **Email :** parmarbrijesh2054@gmail.com

Surat, Gujarat| **Contact :** +91 9054180748

Unity Game Developer with 2.75+ years of professional experience in developing, optimizing, and publishing 2D and 3D mobile games using Unity and C#. Skilled in gameplay programming, UI implementation, AI behavior systems, advanced debugging, and mobile performance optimization. Proven ability to improve game performance from low FPS to a stable 55–60 FPS through profiling, memory management, and optimization techniques. Experienced in integrating monetization solutions such as AdMob, Unity Ads, and In-App Purchases, along with Firebase Analytics, Crashlytics, and third-party SDKs. Proficient in APK size optimization, build compression, localization, and asset management using Addressable and Asset Bundles. Passionate about solving complex technical challenges and delivering high-performance, stable, and engaging mobile gaming experiences.

SKILLS

- **Programming** : C#, Java, C++, C
- **Game Development** : Unity 2D & 3D, Gameplay Mechanics & Systems, Scriptable Objects, Unity Addressable, Asset Bundle, Player Controls & Physics, Animations & State Machines, Nav-Mesh & AI Logic, Unity Profiler, PlayerPrefs / JSON Save System / ES3
- **UI & UX** : Unity UI Systems, Canvas Optimization, Responsive Mobile UI
- **SDK integration** : Firebase Analytics, Crashlytics, In-App-Purchases, Ads integration, etc.
- **Optimization** : Performance Profiling, FPS Optimization, Memory Reduction
- **Tools & Workflow** : Unity Editor, Visual Studio, JetBrains Rider, Git, GitHub (branching, merging)
- **CS Fundamentals** : Object-Oriented Programming (SOLID), Data structures, Performance-aware coding patterns

EXPERIENCE | Unity Game Developer

Escrow InfoTech | *1.75+ Years + Current*

- Designed and developed **full-scale mobile games from scratch** using Unity and C#.
- Designed modular, reusable gameplay architectures using Scriptable Objects and event-driven patterns including **player interactions, AI Behaviours, progression systems, and UI flows**.
- Optimized performance to maintain **stable 50–60 FPS** on low-end Android devices through profiling and code optimization.
- Implemented **enemy AI, chase mechanics, puzzle logic, and event-driven gameplay systems**.
- Reduced frame drops and runtime issues by improving update cycles, physics handling, and memory usage.
- Prepared, tested, and deployed Android builds following **Google Play Store performance and stability standards**.
- Collaborated using GitHub with structured workflows including feature branches and code merges.

  Key Projects:
  - **Business Tycoon: Empire Game – Idle business simulation with income automation and progression systems.**
  - **Naughty Bad Cat: Prankster – 3D simulation game with physics-based interactions and task-driven gameplay.**
  - **Five Nights with Brain rot – Horror escape game featuring AI chase mechanics and puzzle-based survival flow.**
  - **Hero Squad Survival – Enemy wave based game play, integrated Firebase, IAP, Ads.**
  - **And many more…**

CG Games & Animation | *1+ Year*

- Developed multiple **2D arcade, endless runner, and multiplayer games** using Unity.
- Implemented **enemy wave systems, scoring logic, physics-based movement, and collision handling**.
- Strengthened debugging, UI implementation, and gameplay optimization skills across multiple projects.

PROJECTS

Hero Squad Survival | Team Project | Play Store

Developed a wave-based survival game featuring:

- Implemented enemy spawning, wave progression, and AI behavior systems.
- Assisted with gameplay balancing, difficulty progression, and combat mechanics.
- Integrated Firebase, Ads, and In-App Purchases with collaborative GitHub workflows.

Business Tycoon: Empire Game | Play Store

- Developed idle income, automation, and long-term progression systems.
- Implemented tap-to-earn, real estate, stock trading, and upgrade mechanics.
- Designed scalable UI systems to support player progression and engagement.

Naughty Bad Cat: Prankster | Play Store

- Developed player movement, interaction systems, and task-based objectives.
- Implemented physics-based gameplay and interactive prank mechanics.
- Created reward systems and level progression for engaging gameplay.

Five Nights with Brainrot | Play Store

- Developed enemy AI with detection, chasing, and player interaction logic.

- Implemented puzzle-based objectives and survival gameplay systems.
- Added audio-visual gameplay elements to enhance the horror experience.

Worm Prison: Escape Parkour | Play Store

- Developed and implemented core 3D parkour and escape gameplay mechanics.
- Implemented player controls, obstacle interactions, and level progression systems.
- Optimized gameplay and builds for Android devices and Google Play Store release.

Additional Projects

Chess Game

- Developed a complete two-player chess system with rule-based piece movement.
- Implemented turn management, piece validation, and core chess gameplay logic.
- Created an interactive board system for smooth player interaction

Royal Call Break: The Elite

- Developed a multiplayer trick-taking card game with turn-based gameplay.
- Implemented AI opponents, card distribution, and core Call Break rules.
- Built player turn management and game progression systems.

Space Shooter

- Implemented enemy wave spawning and progressive difficulty systems.
- Developed shooting mechanics, power-ups, scoring, and player interactions.
- Created smooth arcade-style gameplay with engaging combat progression.

Flappy Bird Clone

- Developed physics-based player movement and responsive tap controls.
- Implemented procedural obstacle generation and collision detection.
- Added scoring, game-over, and infinite gameplay progression systems.

Pong Multiplayer

- Created a local two-player Pong game with responsive player controls.
- Implemented physics-based ball movement, collisions, and paddle interactions.
- Developed scoring and match management systems.

Dashing Dragon

- Developed an endless runner with smooth player movement and controls.
- Implemented dynamic obstacle spawning and increasing difficulty.
- Created gameplay progression systems for an engaging player experience.

Driving Car Race

- Developed a top-down racing game with responsive vehicle controls.
- Implemented drift mechanics, racing gameplay, and track interactions.
- Optimized vehicle movement physics for smooth gameplay.

Jack Maze Runner

- Developed maze navigation gameplay with challenging obstacle layouts.
- Implemented player movement, collision systems, and level progression.
- Created dynamic gameplay challenges to improve replayability.

Word Sprint: Guess the Word

- Developed core word puzzle mechanics and answer validation systems.
- Implemented hints, scoring, and progressive difficulty levels.
- Created engaging puzzle progression to improve player retention.

Cat Doku: Puzzle Game

- Developed a puzzle-based gameplay system with interactive grid mechanics and logical challenges.
- Implemented player input, validation systems, and progressive difficulty levels.
- Focused on intuitive UI and engaging puzzle progression.

Squicy Escape

- Developed an escape-based gameplay experience with obstacles and level progression.
- Implemented player movement, interactive mechanics, and challenge-based objectives.
- Focused on smooth gameplay flow and responsive player controls.

Trust Issues

- Developed core gameplay mechanics and interactive player systems for a casual game experience.
- Implemented player controls, game objectives, and progression mechanics.
- Focused on creating engaging gameplay interactions and replayability.

3D Player Controller & Combat System

- Developed a reusable 3D player controller with smooth movement and camera controls.
- Implemented combat mechanics, animations, and player state management.
- Built a modular foundation for integrating combat systems into future Unity projects.
